PRS50103 Diploma of Security and Risk Management

Program Overview

The course is aimed at people currently working or wanting to work as a manager of Security Operations or as a Risk Consultant. This qualification is now a requirement for accreditation of the Master Security Licence in NSW and is accepted as a benchmark for security management.

In preparing this program outline Beltin has regard to the expressed needs of a professional with a role or involvement in security advice, supervision and management.

The trainers for this course come from corporate security, military and policing backgrounds. They have worked very closely with the industry including those affected by the industry to deliver a program that is valued for its currency and credibility. Industry feedback is very important - for this reason we encourage you to participate in the knowledge centre.

More than just a course. This program is a business intervention that aligns your people to your business culture.

Program Contents

Core

- BSBMGT504A Manage budgets and financial plans

Apart from working towards a nationally recognised qualification, participants will be increasing their skills and knowledge in the security industry as a whole.

Assessment Strategy

To achieve this qualification the candidate must have demonstrated competency against all 8 core units plus 4 elective units. Up to two of the required four electives may be selected from other relevant endorsed Training Package qualifications aligned at the Diploma level.

Each unit has a series of tasks for participants to complete. These tasks are based on participants solving possible real life problems that occur as part of working in the security industry. Participants leave this course with a professional portfolio of assessed works to act as a professional resource guide.

Flexible Learning and Assessment

The strategy incorporates a blended learning. This is a combination of multiple approaches to learning using virtual and physical resources such as the technology based online toolbox, face-to-face sessions and practical delivery. This enables participants to follow a learning path of their choice whether they choose to read material and then complete the activity sheets or vice versa.

Qualification of this course is achieved through a demonstrated understanding of broad knowledge base incorporating theoretical concepts in substantial depth. Analyse and plan approaches to technical problems or management requirements. Transfer and apply theoretical concepts and/or technical or creative skills to a range of situations. Evaluate information, using it in forecasting for planning or research purposes. Take responsibility for own outputs in relation to broad quantity and quality of parameters. Take some responsibility for the achievement of group outcomes.
